DETAILED ACTION

1. Claims 1-33 are pending. Claims 1-9, 11, 15-23, 25, 29-30, and 32-33 have been cancelled.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
 2. Ascertaining the differences between the prior art and the claims at issue.
 3. Resolving the level of ordinary skill in the pertinent art.
 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
2. Rejection of claims 10, 12-14, 24, 26-28, and 31 under U.S.C. 103 is lifted in view of the amended claims.

Allowable Subject Matter

Claims 10, 12-14, 24, 26-28, and 31 are allowed.

3. Regarding claims 10 and 24, the closest prior art is Barstow (US Patent No. 3289632), which describes a die coater comprising a first and second die block and a plurality of fasteners wherein each of the plurality of fasteners extends through the first die block, into the second die block, and provides a compression force between the first

die block and the second die block. However, Barstow does not teach a die coater further comprising an offset bracket for adjusting the compression force between at least one forward fastener and at least one rearward fastener both of which are located behind the internal manifold and extend through the offset bracket, said offset bracket comprising a forward leg, a rearward leg, an offset arm and having an opening between the forward and rearward legs, the offset arm extending forward of the forward leg, rearward of the rearward leg or being between the forward and rearward legs, as required by the amended claims 10 and 24.

4. Claims 12-14 and 26-28 are allowable as being dependent on claims 10 and 24.
5. Regarding claim 31, Barstow does not teach a dies block in which each of the plurality of fasteners extends through the first die block, into the second die block, and provides a compression force between the first die block and the second die block; and in which the quantity defined by the cube of the ratio of the overhang/thickness divided by the modulus of elasticity of the first die block is less than about $3.0 \times 10^{-7} \text{ in}^2/\text{lb}$ ($4.35 \times 10^{-5} \text{ MPa}^{-1}$).
